Structures:
CMPSC 102

Oliver
BONHAM-
CARTER

Let's Discuss

Sets

Functions as
Sets

General Sets

Infinite Sets

Order

Working with
Sets

Checking for
Elements

Key Questions

How do I use the mathematical concepts of **sets** and **Boolean logic** to design Python programs that are easier to implement and understand?

Learning Objectives

To **remember** and **understand** some concepts about the **set**, exploring how its use can simplify the implementation of programs.

Georg Ferdinand Ludwig Philipp Cantor

Creator of Set theory

Discrete
Structures:
CMPSC 102

Oliver
BONHAM-
CARTER

Let's Discuss

Sets

Functions as
Sets

General Sets

Infinite Sets

Order

Working with
Sets

Checking for
Elements

- German mathematician: 19 February 1845 - 6 January 1918
- Function definition: established the importance of one-to-one correspondence between the members of two sets (more on that in a moment!)
- Defined infinite and well-ordered sets
- Proved that the real numbers (*rational* and *irrational*) are more numerous than the natural numbers (*counting* numbers)

Functions as Sets

Regular Set: one-to-one relationship maintained

Discrete
Structures:
CMPSC 102

Oliver
BONHAM-
CARTER

Let's Discuss

Sets

Functions as
Sets

General Sets

Infinite Sets

Order

Working with
Sets

Checking for
Elements

Letter Set

Number Set

- The Letter set maps to the Number set.
- $LetterSet(x) \rightarrow NumberSet(y)$

Functions Sets

Regular Set: one-to-one-ism is maintained

Discrete
Structures:
CMPSC 102

Oliver
BONHAM-
CARTER

Let's Discuss

Sets

Functions as
Sets

General Sets

Infinite Sets

Order

Working with
Sets

Checking for
Elements

Letter Set

Number Set

- The Letter set maps to the Number set.
- $LetterSet(x) \rightarrow NumberSet$

Functions as Sets

One-to-one-ism is NOT maintained!

Discrete
Structures:
CMPSC 102

Oliver
BONHAM-
CARTER

Let's Discuss

Sets

Functions as
Sets

General Sets

Infinite Sets

Order

Working with
Sets

Checking for
Elements

Letter Set

Number Set

- Multiple elements of Number set map to Letter set.

Functions as Sets

One-to-one-ism is NOT maintained!

Discrete
Structures:
CMPSC 102

Oliver
BONHAM-
CARTER

Let's Discuss

Sets

Functions as
Sets

General Sets

Infinite Sets

Order

Working with
Sets

Checking for
Elements

- Multiple elements of Number set map to Letter set.

What is a set?

- For example, the numbers 1, 2, and 3 are distinct objects when considered separately, but when they are considered **collectively** they form a single set of size three, written $\{1,2,3\}$.
- Set theory is now a ubiquitous part of mathematics,
- May be used as a foundation from which nearly all of mathematics can be derived (From 19th century mathematical thinking!)

Types of Sets

Intensional and Extensional

Discrete
Structures:
CMPSC 102

Oliver
BONHAM-
CARTER

Let's Discuss

Sets

Functions as
Sets

General Sets

Infinite Sets
Order

Working with
Sets

Checking for
Elements

- **Question:** What kind of set do we have?
- **Answer:** We can provide two main definitions of sets.

Intentional definition of sets: *I intend this set to be ...*

- Defines a set by specifying the necessary and sufficient conditions for when the set should be used.

Extensional definition of sets: *Logically this set is ...*

- Defines a set by some definition of a concept or a term.

Intensional Sets

Discrete
Structures:
CMPSC 102

Oliver
BONHAM-
CARTER

Let's Discuss

Sets

Functions as
Sets

General Sets

Infinite Sets

Order

Working with
Sets

Checking for
Elements

A list of characters in Sherlock Holmes

- {Sherlock Holmes, Dr. John Watson, D.I. Greg Lestrade, Mrs. Hudson, Mycroft Holmes, Irene Adler, Mary (Morstan) Watson}

Types of Sets

Intentional: One decides which elements make up a set

Discrete
Structures:
CMPSC 102

Oliver
BONHAM-
CARTER

Let's Discuss

Sets

Functions as
Sets

General Sets

Infinite Sets

Order

Working with
Sets

Checking for
Elements

Set of Circles

Set of Triangles

Intentional definition of sets: *I intend that these set be ...*

- The set of blue, grey and pink circles
- The set of blue triangles
- The set of colors of the Union Jack (i.e., the British flag)

Types of Sets

Extensional: Sets of members in curly brackets

Discrete
Structures:
CMPSC 102

Oliver
BONHAM-
CARTER

Let's Discuss

Sets

Functions as
Sets

General Sets

Infinite Sets

Order

Working with
Sets

Checking for
Elements

Extensional definition of sets

- $A_2 = \{4, 2, 1, 3\}$
 - The first four positive numbers
- $B_2 = \{\text{Blue, Red and White}\}$
 - The set of colors of the Union Jack (the British flag)
- $F = \{n^2 - 4 : n \text{ is an integer; and } 0 \leq n \leq 19\}$
 - The set of all values gained from plugging in n between 0 and 19 into the equation $n^2 - 4$

Types of Sets

Extensional definition of sets: a list of its members in curly brackets

Discrete
Structures:
CMPSC 102

Oliver
BONHAM-
CARTER

Let's Discuss

Sets

Functions as
Sets

General Sets

Infinite Sets

Order

Working with
Sets

Checking for
Elements

- **Intentional Definition:**

- A_1 is the set are the first four positive integers.
- B_1 is the set of colors of the Union Jack

- **Extensional Definition:**

- $A_2 = \{4, 2, 1, 3\}$
- $B_2 = \{\text{Blue, Red and White}\}$

Specify a set *intentionally* or *extensionally*

In the examples above, for instance, $A_1 = A_2$ and $B_1 = B_2$

Sets with Notation

Venn Diagram

- \cup , Union: $A \cup B$ of a collection of sets A and B is the set of all elements in the collection
- \cap , Intersection $A \cap B$ of two sets A and B is the set that contains all elements of A that also belong to B

Create your own Venn diagram of TWO sets!!

Let's Discuss

Sets

Functions as
Sets

General Sets

Infinite Sets

Order

Working with
Sets

Checking for
Elements

```
#!/usr/bin/env python3
# -*- coding: utf-8 -*-
# -----
# setup a python virtual environment
# python3 -m venv myVenv
# source myVenv/bin/activate
# pip install matplotlib_venn

import matplotlib.pyplot as plt
from matplotlib_venn import venn2

# Define the two sets
set1 = set([1, 2, 3, 4, 5])
set2 = set([3, 4, 5, 6, 7])

# Create a Venn diagram
venn2([set1, set2], ('Group1', 'Group2'))

# Add a title
plt.title('Venn Diagram of Two Sets')

# Show the plot
plt.show()
```

Note: you may need to run this code in a virtual environment with numpy and matplotlib installed!

Create your own Venn diagram of THREE sets!!

Let's Discuss

Sets

Functions as
Sets

General Sets

Infinite Sets

Order

Working with
Sets

Checking for
Elements

```
import numpy as np
import matplotlib.pyplot as plt
import matplotlib.colors as mcolors
import random
# -----
myColors = mcolors.TABLEAU_COLORS
line = [0,1]
depth = 6

def divide(line, level=0):
    """ partition the lines to form the sets. """
    # thisColour = "k" # black
    thisColour = random.choice(list(myColors.values()))
    plt.plot(line,[level,level], color=thisColour, lw=5, solid_capstyle="butt")
    if level < depth:
        s = np.linspace(line[0],line[1],4)
        divide(s[:2], level+1)
        divide(s[2:], level+1)

divide(line)
plt.gca().invert_yaxis()
plt.show()
```

Note: you may need to run this code in a virtual environment with numpy and matplotlib installed!

Listing Elements in Sets

Discrete
Structures:
CMPSC 102

Oliver
BONHAM-
CARTER

Let's Discuss

Sets

Functions as
Sets

General Sets

Infinite Sets

Order

Working with
Sets

Checking for
Elements

- In extensionally defined sets, members in braces can be listed two or more times,
 - For example, $\{11, 6, 6\}$ is identical to the set $\{11, 6\}$
- Order of members is not important
 - For example, $\{6, 11\} = \{11, 6\} = \{11, 6, 6, 11\}$

Similar to the equivalence of these pie charts:
the content is the same in both cases

Sets in Python

An array of non-redundant elements

Discrete
Structures:
CMPSC 102

Oliver
BONHAM-
CARTER

Let's Discuss

Sets

Functions as
Sets

General Sets

Infinite Sets

Order

Working with
Sets

Checking for
Elements

Creating a set of chars

```
x_st = set("This is a set")
x_st    # or print(x_st)
        # the unordered chars are the elements
        # {'s', 'T', ' ', 'e', 't', 'h', 'i', 'a'}
print(type(x_st))
        # <class 'set'>
```

Creating a set of string(s)

```
x_st = set(["This is a set"])
x_st    # or print(x_st)
        # only one element in set; the string itself
        # {'This is a set'}
x_st = set(["This", "is", "a", "set"])
        # each word is an element
        # {'This', 'is', 'set', 'a'}
```

Sets in Python

CARTER

Let's Discuss

Sets

Functions as
Sets

General Sets

Infinite Sets

Order

Working with
Sets

Checking for
Elements

```
# next line on one line
cities_st = set(("Paris", "Lyon",
                "London", "Berlin", "Birmingham", "Paris"))
print(cities_st)
# {'Berlin', 'Paris', 'Birmingham', 'London', 'Lyon'}
```

Adding new elements

```
cities_st = set(["Frankfurt", "Basel", "Freiburg"])
cities_st.add("Meadville")
cities_st # or print(cities_st)
# {'Freiburg', 'Meadville', 'Basel', 'Frankfurt'}
```

Sets in Python

Discrete
Structures:
CMPSC 102

Oliver
BONHAM-
CARTER

Let's Discuss

Sets

Functions as
Sets

General Sets

Infinite Sets

Order

Working with
Sets

Checking for
Elements

Removing elements

```
cities_st = set(["Frankfurt", "Basel", "Meadville"])
cities_st.remove("Meadville")    # Meadville is a key
cities_st    # or print(cities_st)
           # {'Basel', 'Frankfurt'}
```

Frozensets cannot be changed

```
cities_st = frozenset(["Frankfurt", "Basel", "Freiburg"])
cities_st.add("Meadville")
           # AttributeError:
           # 'frozenset' object has no attribute 'add'
cities_st # or print(cities_st)
           # frozenset({'Freiburg', 'Basel', 'Frankfurt'})
type(cities_st)
           # <class 'frozenset'>
```

Sets in Python

Discrete
Structures:
CMPSC 102

Oliver
BONHAM-
CARTER

Let's Discuss

Sets

Functions as
Sets

General Sets

Infinite Sets

Order

Working with
Sets

Checking for
Elements

Removing all elements of set

```
cities_st = {"Stuttgart", "Konstanz", "Freiburg"}
cities_st
# {'Freiburg', 'Konstanz', 'Stuttgart'}
cities_st.clear()
cities_st
# set()
```

Determining difference between sets

```
x = {"a","b","c","d","e"}
y = {"b","c"}
z = {"c","d"}
x.difference(y) # {'a', 'e', 'd'}
x.difference(y).difference(z) # {'a', 'e'}
```

- Returns the characters which are never repeated across {x, y, y}

Sets in Python

Discrete
Structures:
CMPSC 102

Oliver
BONHAM-
CARTER

Let's Discuss

Sets

Functions as
Sets

General Sets

Infinite Sets

Order

Working with
Sets

Checking for
Elements

Difference and subtraction

```
x = {'c', 'a', 'd', 'b', 'e'}  
y = {'c', 'b'}  
x.difference_update(y)  
print(x) # {'a', 'd', 'e'}  
print(y) # {'c', 'b'}  
  
print(x)  # {'a', 'e', 'd'}  
x = {"a","b","c","d","e"}  
y = {"b","c"}  
x = x - y  
print(x)  # {'e', 'd', 'a'}
```

- Top: Returns an updated set of x of the characters which are never repeated across $\{x, y, y\}$

Sets in Python

Discrete
Structures:
CMPSC 102

Oliver
BONHAM-
CARTER

Let's Discuss

Sets

Functions as
Sets

General Sets

Infinite Sets

Order

Working with
Sets

Checking for
Elements

Cloning and removing from original

```
x = {'e', 'd', 'a'}  
v = x  
print(x)    # {'a', 'e', 'd'}  
print(v)    # {'a', 'e', 'd'}
```

```
x.remove('a')  
x    # {'e', 'd'}  
v    # {'e', 'd'}
```

```
v.remove('d')  
x    # {'e'}  
v    # {'e'}
```

- `x = v` does not make a copy of `x`. Instead this is a reference from one object to another.

Checking for Particular Elements

Discrete
Structures:
CMPSC 102

Oliver
BONHAM-
CARTER

Let's Discuss

Sets

Functions as
Sets

General Sets

Infinite Sets

Order

Working with
Sets

Checking for
Elements

Is an element in a List?

```
x = {"a","b","c","d","e"}  
"e" in x      # True  
"e" and "a" in x  # True  
"e" and "i" in x  # False
```

Iterating Through Elements in Sets

Discrete
Structures:
CMPSC 102

Oliver
BONHAM-
CARTER

Let's Discuss

Sets

Functions as
Sets

General Sets

Infinite Sets
Order

Working with
Sets

Checking for
Elements

Iteration

```
abc_set = {"a","b","c","d","e"}  
for i in abc_set:  
    print(i)
```

Note

- Since there is no order control in the set, you cannot know which element will be printed first (from above).
